VERSION WITH MARKINGS TO SHOW CHANGES MADE

Claim 1 has been amended as follows:

1. (Amended) A thermally-regulated two Combined bottles with hidden cooler comprising:

a pair of identical two bottles with specially design where each bottle has a semi-circle cross section whose inner side walls with has cavity that after being combined together create a chamber suitable for a specially designed liner where the bottom of said cavity represents semi-cylinder with the height smaller than its diameter, and the upper part of said cavity represents truncated rectangular pyramid with the height shorter than the distance between the bottom of said bottle and the beginning of the cone constituting the bottle's neck;

a container for cooler coolant implemented as a liner with a chamber adapted for temperature exchange made from a plastic or similar thermally-regulated material that slides in and hides inside of a chamber made by two interlocked together bottles when said liner is cored and filled with refrigerant and has a closure;

a recess formed with said cavities of the bottles after combining, being sized and shaped to receive a thermally-regulating coolant container;

a pair of two plastic strips with lockers that combine the set together for interlocking said bottles after a set is being combined.
